

## Project: Operational live dashboards (POC)

### The Business Challenge:

- Consolidation of day to day operational data gathered in Excels by various teams
- Manual efforts in generating various Weekly, Monthly reports
- Real time reports and dashboards displaying multi-system data not available
- Integrate Service Desk application and Teamcenter

### Benefits & Highlights of eQube DaaS based solution

- Connecting disparate systems to form a network of integrated data
- Provide the business with clear and timely operational performance information through live dashboards and reports
- Provision to scale to other Business Units

## JCB Case Study

Leading manufacturer of earthmoving and construction equipment, UK

## Features

- eQube®-MI based 'For-Purpose' application built to simplify day to day operational data entry
- Role based access to functionality
- Master Data management for Domains, Projects, Products, and Teams
- eQube®-BI/TcRA based Dashboards and Metrics for Design Centre health and trends based on the data collected from applications
- Create Teamcenter Change objects based on Service Desk application data

## eQ Process

- Product used: eQube®-MI and eQube®-BI
- Solution designed leveraging Service oriented architecture (3 tiers of Services)
