

## Project: Enterprise wide reporting over Teamcenter and Internal Support Systems

### The Business Challenge:

Visibility to Product Data from Plan to Actual. Monitor Performance and Usage.

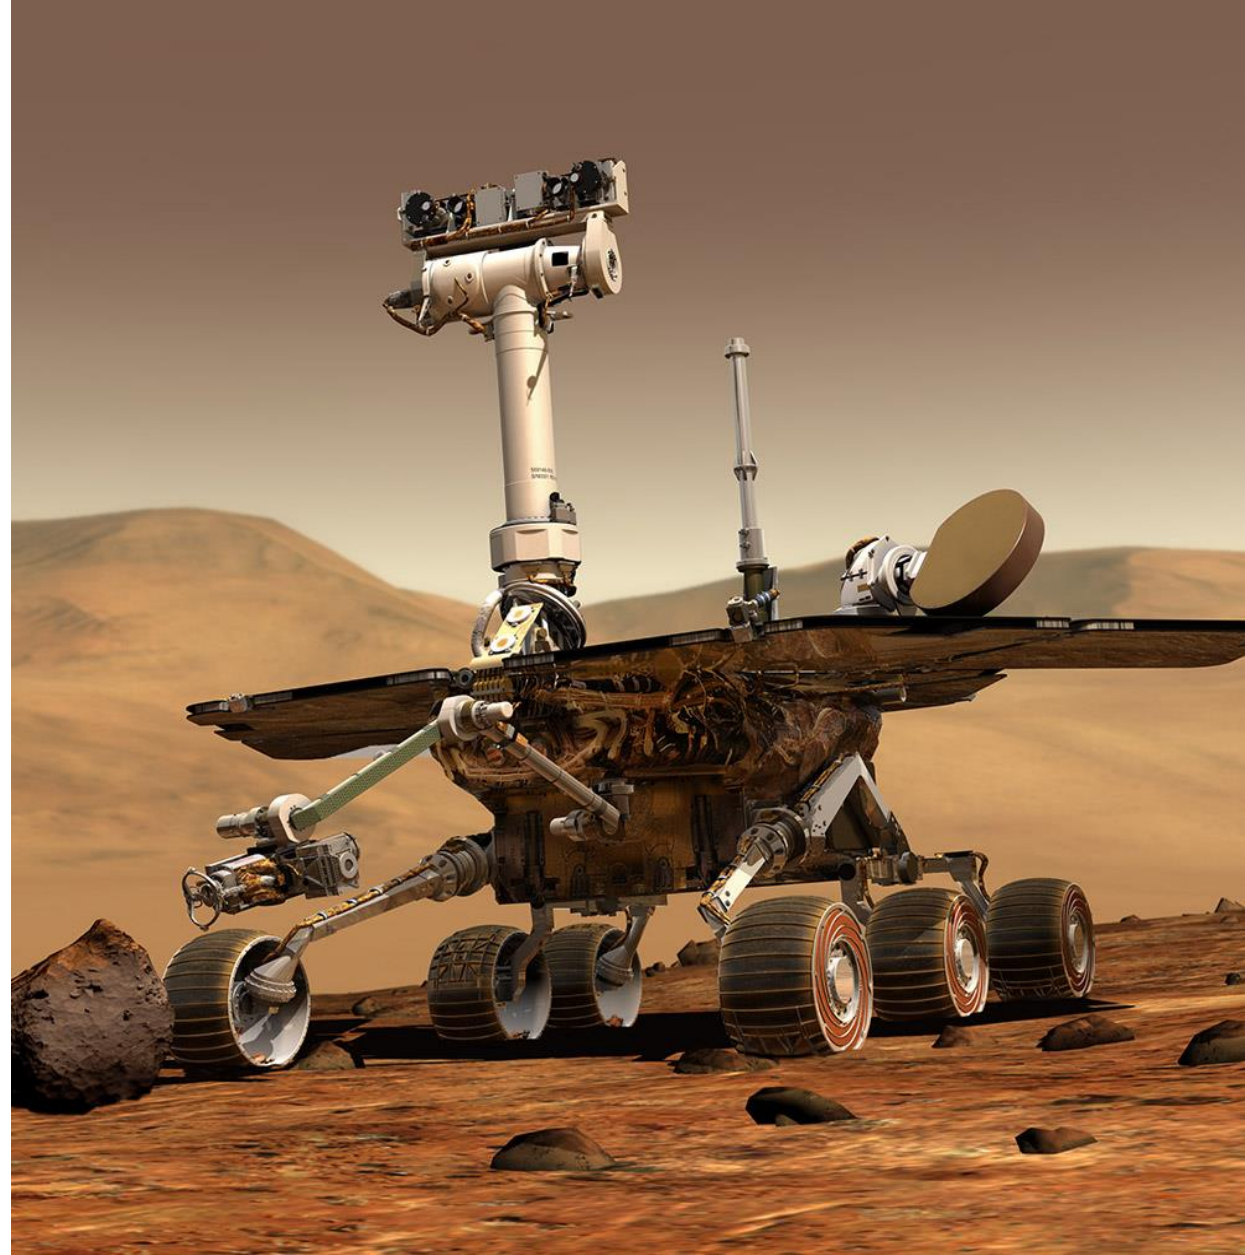

- Search product design data for all missions
- Track product data from plan, design, build, test, quality, and problem reporting
- Monitor throughput and performance of configuration management
- Data Integrity checks and usages

### Benefits & Highlights of eQube DaaS based solution

- Business intelligence capabilities on the data, including usage, trending, workflow, production planning, etc.
- A scalable platform to mine their Data Warehouse and to mash-up data directly from other systems
- Provide global visibility to project data
- Transitioned Teamcenter Enterprise KPIs/reports to Teamcenter Unified

## JPL Case Study

Explore space in pursuit of scientific discoveries that benefit humanity

## Features

- Ad-hoc search reports w/embedded links for Actionable Insight
- One stop shop portal integrated into Active workspace
- Advanced Caching for fast responses of large datasets
- Reports for Engineering Design, Change Notices, Workflows, User Management, Bill of Material, etc.

## eQ Process

- Product used: eQube®-BI
- Data sources JPL Data Warehouse, Teamcenter and other data systems
